SUMMARY

Full-Stack Engineer with 6+ years of experience building scalable web applications, automation systems, and blockchain-integrated platforms. Proven track record delivering production-grade SaaS products, multi-platform bots, and on-chain analytics systems across fintech and Web3 environments. Strong in API integrations, real-time data processing, and end-to-end product delivery using modern JavaScript frameworks and cloud infrastructure.

EDUCATION

Lagos State University
B.Sc. Computer Science *2020 – 2024*

EXPERIENCE

Freelance Full-Stack & Bot Developer Oct 2025 – Present
Remote

- Built and launched a multi-platform bot (WhatsApp and Discord) supporting real-time financial charting, crypto price conversion, NFT analytics, and automated token lookups across multiple blockchains
- Developed Telegram bots for Web3 and automation use cases including token gating, wallet verification, and on-chain event notifications
- Integrated multiple APIs including Telegram, Discord, WhatsApp, and OpenAI to deliver production-grade automation systems
- Delivered full-stack SaaS platforms and dashboards for clients across Nigeria, UK, and US
- Accelerated development workflows using AI-assisted tooling for debugging, documentation, and feature delivery

Full Stack Developer July 2023 – Sept 2025
Kingdomly *Remote*

- Architected and delivered an internal admin and auto-payout system, improving operational efficiency and reducing manual processes
- Built blockchain data pipelines across Ethereum, Polygon, Avalanche, and Arbitrum, transforming raw on-chain data into analytics dashboards and user-facing reports
- Implemented automated cron-based systems for data ingestion, claim tracking, and analytics generation
- Led migration from Firebase to PostgreSQL, improving data reliability and query performance
- Developed responsive web interfaces using Next.js, React, and Tailwind CSS from Figma designs
- Wrote and integrated Solidity smart contracts for NFT minting, staking, and rental systems
- Integrated Safe Wallet SDK to build a multi-signature treasury management system

Frontend Developer Oct 2023 – Feb 2024
Palremit *Remote*

- Built responsive frontend interfaces for a cross-border payments platform supporting 150+ countries
- Integrated payment APIs, FX conversion flows, and virtual card features with backend systems
- Ensured cross-browser compatibility and mobile responsiveness across the platform

Freelance Full-Stack Developer Jan 2019 – Sept 2022
Remote

- Delivered 20+ web applications including SaaS platforms, e-commerce systems, and admin dashboards
- Built full-stack applications using React, Node.js, MongoDB, and PostgreSQL from concept to deployment
- Integrated third-party services including payment gateways, messaging APIs, and social platforms
- Managed cloud deployments and automated build pipelines on AWS and VPS environments

PROJECTS

Clyrbot | Multi-platform bot on WhatsApp and Discord with financial tools, NFT analytics, and automation features

Web3 Telegram Bots | Production bots for token gating, wallet verification, and on-chain notifications

BeraLabs Platform | 3D landing page and airdrop claim system with social authentication and smart contract integration

Kingdomly Admin System | Internal platform with analytics dashboards, payout automation, and multi-sig wallet management

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Solidity, HTML, CSS

Frontend: React, Next.js, Tailwind CSS

Backend: Node.js, Express.js

Infrastructure: AWS, Docker, Cron Jobs

Databases: PostgreSQL, MongoDB, Firebase

Web3: Ethers.js, Wagmi, Web3.js, Smart Contracts

Automation & Bots: Telegram Bot API, Discord.js, WhatsApp API, OpenAI API, Claude API

ADDITIONAL

Strong experience working with international clients across multiple time zones Comfortable building end-to-end systems from architecture to deployment
